

Ekopak opens new office in the Philippines to support regional growth and signs up a major client in Singapore

Manila, Philippines – October 23, 2024 – 14.00h PHST

Ekopak, a company specializing in circular water solutions, is pleased to announce the opening of its new, larger office in Manila (Philippines). On top of this celebration, Ekopak, in close collaboration with our colleagues at WaaS Asia, signed a contract with a major client in Singapore.

The new office, officially inaugurated by CEO Pieter Loose and Business Unit Manager Uli Ombregt, will support the company's rapid growth and enhance its ability to deliver sustainable water management technologies across the region.

"We currently employ about 53 people in Manila, our previous office was too small to meet the company's growth. This new space will allow us to better serve our clients and expand our team." - Uli Ombregt, Business Unit Manager Global Water & Energy.

"Our new office will strengthen our mission to help companies implement circular water systems and comply with local wastewater discharge regulations through our wastewater treatment solutions," said Pieter Loose, CEO Ekopak Sustainable Water.

Ekopak Group's client portfolio in Southeast Asia includes renowned multinational corporations such as Nestlé, Mars, and FrieslandCampina. Recently, the company received two purchase orders from Lotus Bakeries Thailand related to a high-quality water treatment installation and a wastewater treatment installation. In addition, in conjunction with **WaaS Asia**, Ekopak signed a reference contract to provide a process water installation for a major energy player in Singapore.

The new office and the strong progress made by WaaS Asia reflect Ekopak's continued commitment to addressing water challenges in Southeast Asia through innovation and sustainable practices.

About Ekopak Sustainable Water

Ekopak is a Belgian company specializing in solutions for industrial water treatment and wastewater treatment. Ekopak's solutions enable industrial customers to reduce their water consumption in a sustainable, reliable, and cost-effective way and to treat their wastewater. Ekopak also enables its customers to disconnect from the regular water network and initiate circular water use. To this end, Ekopak focuses on optimizing water consumption with modular water treatment units that convert off-grid water sources, such as rainwater, surface water, and/or wastewater into purer water that can be used and reused in the customer's industrial processes.

Ekopak offers its solutions on a global scale and operates worldwide with offices in Belgium, France, The Netherlands, Morocco, the Philippines, Thailand, Mexico, Singapore, and the US.

All Ekopak shares are listed on Euronext Brussels (ticker EKOP).
